

Minghao Guo

PERSONAL INFORMATION

Phone: +86 13001998064
Email: gmh@pku.edu.cn
Homepage: mh-guo.github.io

Address: Peking University, 5 Yi He Yuan Road,
Haidian District, Beijing, P.R. China
ORCID: orcid.org/0000-0002-3680-5420

EDUCATION

Peking University

Beijing, CN

Bachelor of Science in Physics, Minor in Mathematics

Sep. 2016 – Expected June 2021

- GPA: 3.65/4.0; GRE Physics 990/990
- Relevant Advanced Courses: Topology, General Relativity, Group Theory, Quantum Field Theory, Gravitational Wave Physics, Computational Physics, Computational Fluid Dynamics, Foundations of Parallel and Distributed Computing, and all lower-division courses

RESEARCH INTERESTS

- Galaxy dynamics and evolution, galaxy structure
- Black hole (BH) physics, high energy astrophysics, accretion disks, active galactic nuclei (AGN)
- Modified gravity, neutron stars, pulsars, gravitational waves, dark matter
- Numerical simulations, Numerical methods, New numerical techniques

RESEARCH EXPERIENCE

Surrogate model of scalar-tensor gravity and application to neutron stars	Feb. 2020 – Present
Advisor: Prof. Lijing Shao	Peking University, CN
<ul style="list-style-type: none">• Designed and developed a method for computing derived quantities in scalar-tensor gravity of Damour and Esposito-Farèse (DEF) with pontaneous scalarization phenomena developed for neutron stars• Constructed reduced-order surrogate model for the derived quantities• Coded the model in a python package pySTGROMX that speeds up calculations at two order-of-magnitude yet still keeps accuracy, compared with the previous method• Applied pySTGROMX to constrain the parameters of the DEF theory with well-timed binary pulsars	

- Currently working on a first-author paper manuscript in prep for *Physical Review D*

Evolution of black hole mass function at high redshift

Oct. 2020 – Present

Advisor: Prof. Kohei Inayoshi

Peking University, CN

- Constructed a model for the evolution of black hole mass function based on AGN luminosity
- Predicted the evolution of black hole mass function and AGN mass function using the latest Hyper Suprime-Cam (HSC) data

Hunting for wandering massive black holes

Feb. 2019 – Present

Advisors: Prof. Kohei Inayoshi, Prof. Luis C. Ho

Peking University, CN

- Performed three-dimensional simulations for gas accretion onto a wandering black hole at the outskirts of galaxies (e.g., massive ellipticals, Milky Way, dwarf galaxies)
- Constructed radiative inefficient accretion-flow models for accretion near the horizon of a black hole
- Applied the simulation results to the emission model and worked out the spectral energy distribution for the accretion flow onto a wandering black hole
- Studied the detectability of wandering (massive) black holes in different types of galaxies, predicting that ALMA will enable us to hunt for a population of wandering black holes
- This work resulted in a first-author publication in the *Astrophysical Journal*

Quasar lifetime model

June 2020 – Sep. 2020

Advisor: Prof. Kohei Inayoshi

Peking University, CN

- Constructed a model for lifetime of quasars based on standard disk model
- Built a theoretical correlation between the mass, luminosity and lifetime of quasars
- Compared the model with the observed quasar lifetimes from measurements of proximity zone size

Coevolution of supermassive black holes and their host galaxies

Mar. 2018 - Jan. 2020

Advisors: Prof. Luis C. Ho, Prof. Victor P. Debattista

Peking University, CN

- Made N-body simulations to investigate the dissolution of bars and the growth of bulges, under the dynamical influence of central black holes
- Built morphological decomposition for the structures of the galaxy models using IRAF and GALFIT
- Investigated the growth of a central black hole, the dissolution of the nuclear bar, and the gradual formation of an inner bulge through morphological decomposition as well as the dynamics of galaxies
- Demonstrated that the initially boxy/peanut-shaped bulge is transformed into a more massive, compact structure that bears many similarities to a classical bulge, in terms of its morphology, kinematics, and location on standard scaling relations
- Led to a first-author paper published in the *Astrophysical Journal*

HONORS AND AWARDS

Yuanpei Outstanding Young Scholars (Awarded to 9/350)	Dec 2020
Lin-bridge First Prize for Undergraduate Research (endowed by Prof. Douglas Lin)	Sep. 2020
Yuanpei College First Award for Undergraduate Research (Awarded to 3/350)	June 2020
Xingcheng Award for Undergraduate Research	May 2019
National Undergraduate Research & Training Program	May 2019
Peking University Scholarship for Outstanding Freshmen (top 10%)	Sep. 2016

CONFERENCE EXPERIENCE

2020 PKU-DoA Undergraduate Astronomy Symposium (Oral presentation) <i>Hunting for Wandering Massive Black Holes</i>	Sep. 2020
2019 PKU-DoA Undergraduate Astronomy Symposium (Oral presentation) <i>A New Channel of Bulge Formation via the Destruction of Short Bars</i>	Sep. 2019
2019 Annual Meeting of Chinese Astronomical Society (Oral presentation) <i>A New Channel of Bulge Formation via the Destruction of Short Bars</i>	Sep. 2019
IAU Symposium 353: Galactic Dynamics in the Era of Large Surveys (Poster presentation) <i>The Role of Short Bar Destruction in Regulating the Co-evolution of Black Holes and Bulges</i>	June 2019

TECHNICAL SKILLS

Programming: Proficient in Python, C/C++, L^AT_EX, Mathematica, Git; Basic knowledge of Matlab and Fortran.

Software and Packages: emcee, MPI, OMP, cuda, SymPy, yt, VisIt, ParaView, PLUTO, IRAF, GALFIT

Techniques: Massive parallel computing on supercomputer, analyzing dataset and visualization.

Language: Mandarin (Native), English (Fluent; GRE General 320+3; TOEFL iBT 102)

ACTIVITIES

- 2020 Theoretical Physics and Particle Physics Summer School of Peking University Aug. 2020
- São Paulo School of Advanced Science on First Light:
Stars, Galaxies and Black Holes in the Epoch of Reionization Aug. 2019
